

Introduction to Analytical Thinking and course pedagogy

Duration: 1-2 Days

Importance of Data in today's world, Decisions backed by data and driven by insights, Why Data Science and Machine Learning are here to stay, Different Career paths in Data Science, Data Science Vs Analytics Vs Machine Learning Vs AI

Data Foundation through SQL

Duration: 6 Days

Understanding DBMS and data storage architecture, completing SQL Zero to Hero boot camp, advancing SQL concepts like performance tuning, writing Optimized code, and writing queries to implement complex logic.

Introduction to Python

Duration: 15 Days

Anaconda Installation, Python syntax, Python Data structures, Dealing with Date and time data, Functions, Packages, and Modules, File Handling (Reading and Writing), Exception Handling, Basics of Object-Oriented Programming, Data analytics using Pandas

Introduction to Python

Duration: 15 Days

Representing variables in a coordinated graph, Measures of Location, Measures of Spread, Scatterplots, Measures of Association, Introduction to Probability, Conditional Probability, Joint Probability, Continuous random variables, Probability distribution Function, Types of Distribution, Hypothesis testing

Introduction to Python

Duration: 15 Days

Introduction to Machine Learning, Linear Regression masterclass, Logistic regression, KNN Algorithm, Decision Trees, Support Vector Machines, Distance measurement theories, Random Forest, Bagging and Boosting algorithms, Dimensionality Reduction Techniques, Clustering Algorithms, Anomaly Detection, Handling Imbalanced Datasets, Introduction to Neural Networks using Keras.

Machine Learning Project: Complete the Machine Learning Project Life cycle, Build your 1st ML project on real-world Data.

Data Visualization using Tableau

Duration: 7 Days

Installing Tableau desktop, Connecting to data sources, Dimension Vs Measures, Creating Calculating fields, Set theory, Parameters, Filtering techniques, Tableau Dashboard, Tableau Stories, and advanced analytical functions
